

Ridiculous Situation in South Australia during 2022, where unfounded/unscientific govt policy caused unnecessary harm and distress to children and families.

Situation as at March 2022...

My [REDACTED] daughter is now no longer able to compete at Athletics SA events at the SA Athletics OUTDOORS Stadium at [REDACTED] as they are now requiring everyone over the age of 12 (and soon over the age of 5!?! ) to have received Covid injections in order to enter stadium and compete. Yes, mandating injection for children. For an open air outdoor sport. With experimental, emergency approved gene therapy therapeutic that does not reduce transmission at all, and comes with more risk for children than they are at from covid itself. I understand this disgraceful and discriminatory mandate decision by Athletics SA was driven by its funder, the SA Office of Recreation & Sport. The stadium itself has no such mandate, and other groups using the stadium have no such mandate eg Little Athletics, it's just Athletics SA events.

It remains an unprecedented and unforgivable madness of our time that no cost-benefit analysis was ever done on any covid policies employed over the past 2 years, and the world, especially our children, have suffered, and will be suffering the consequences for generations to come. It has been clearly established for some time now by both scientific evidence and real world data that policies such as masks make no difference at all when it comes to transmission, and on the contrary in fact do great harm to children in particular, in diverse and incredibly important social/mental/developmental/psychological/health ways. This is exactly why so many countries around the world are unwinding/cancelling/reversing so many damaging covid policies like lockdown, masks and "vaccination" mandates, and unfortunately Australia remains behind the scientific/data/evidentiary curve.
