

I was Switchboard Operator at a major hospital - SCGH in Perth, WA & answered for 5 hospitals. I put out emergency pages, connected doctors within & outside the hospital, input doctors rosters and answered hundreds of calls from members of the public amongst many other tasks. It was a highly trained position. I worked mostly 6 days a week over 24 hour rosters & mostly did nightshifts that others were not keen on doing. When Covid hit there was a great deal of pressure to take the experimental vaccine. I did my own research & found Covid had a 98.9% recovery rate & saw Israel well ahead of us & the injuries & deaths happening to young and healthy. I was getting more & more pressure to take vaccine from management & continual emails giving me anxiety. As I was casual I was no longer rostered on and threatened with \$10,000 fine if I entered the premises. I have now lost over 130k in earnings and lost my 20 year medical industry career.
