

1. It is the ABSOLUTE RIGHT of every citizen to decide his own medication!
During Covid, State and Federal Governments imposed compulsion by default when unvaccinated people lost their jobs or we unable to go places.
2. Vaccines were NEVER properly tested and had dangerous and sometimes fatal side effects. The Therapeutic Goods Administration totally failed in its duty to protect the Australian people because the government shamefully accepted the flawed testing conducted by the pharmaceutical companies themselves.
3. Statistics, including weekly deaths from ordinary influenza, were fraudulently attributed to Covid.
4. Serious side effects and actual deaths from vaccines were blatantly ignored. There was a conspiracy of silence from health authorities, and complaints, inquiries or objections were ignored, censored or ridiculed.
