

## COVID Response inquiry/consultation

As an individual who was subjected to being coerced into having COVID vaccines due to corporate mandates and receiving vaccine adverse reactions. I feel that the country is owed a Royal Commission into the handling of this ongoing pandemic.

The Government needs to address all the following points in the inquiry.

1. Not accepting the laboratory origin of SARS-CoV-2 despite overwhelming evidence and failure to take steps to prevent this catastrophe from repeating itself i.e Gain of function research that is still happening.
2. Unable to properly evaluate the quality, safety and efficacy of the COVID-19 “vaccines” prior to release to the public. Especially now that under FOI the final [REDACTED] documents are available to the public.
3. Did not ensure that an efficient, transparent, user-friendly and conflicted adverse event reporting system was in place for the public to access.
4. Still no acknowledgement for the need to investigate the rise in unexpected, non-Covid Excess Deaths which commenced only after the rollout of the Covid “vaccines”. Investigations of unexplained deaths possibly related to the vaccines need to have an autopsy.
5. Government policies need to be investigated regarding masks, lockdowns, school closures, travel restrictions and vaccine mandates have been shown to be useless and counterproductive - Australia suffered more than most other countries.

6. Doctors and experts censored by AHPRA and ATAGI were unable to formulate proper medical advice – ie early treatment was banned, ill-advised ventilation/over use of opioids and remdesivir, ignorance of the importance of natural immunity, demonisation of therapeutics shown to be effective (ivermectin, hydroxychloroquin, inhaled steroids, vitamin D etc.)
7. An inquiry is needed in regards to the Official misinformation and false claims made for the “vaccines”: prevents infection, prevents transmission of infection, “pandemic of the unvaccinated”, children need to be vaccinated and are at significant risk and the vaccines keep you out of hospital.
8. The State leaders did not critically assess and investigate: No cost-benefit analysis, no discrimination for age or individual health status for vaccination, blind acceptance of modelling advice from highly conflicted institutions and individuals.
9. International human rights were not observed, use of coercion to force vaccination, the lack of informed consent and interference in the essential principle of the doctor-patient relationship was ignored.
10. Proper and critical assessment of the PCR test which was set to a sensitivity so high as to produce meaningless results and not be diagnostic for COVID-19.

In conclusion a royal commission into the pandemic should also question whether unelected health officials be able to wield power as they did during the pandemic, with little weight given to the economic and mental health of citizens.

Could it be that a need for a constitutional change is required to ensure the states and territories better coordinate their responses, rather than going off in eight different directions, like

what happened with border closures and people being apprehended and unable to see dying family members.
