

To Whom it May Concern:

- The impact on schooling and children: It was well known statistically that the pandemic did not effect children and the death rate was close to Nil, only effecting those who were already ill of health. The impact of schools closing, parents having to home school their children and then having to vaccinate children to protect the elderly resulted in
  - increased anxiety
  - mental health issues
  - stunt in learning
  - unknown impact of MRNA vaccination on children in years to come.

- The impact of vaccination in regards to death, heart issues and other health issues. We have had a number of family friends have blood clots, a death, increased health issue, shingles, repeats of the covid virus and depleted health after their vaccinations. My father was the only person in our family who was vaccinated and has deteriorated tremendously, recently being diagnosed with [REDACTED] Please see a study on the effect of vaccinations below, that show only approximately 32% have not impact:

Improvement suggestions: Governments need to take more responsibility in promoting immune health and listening to doctors treating virus patients that are having success. Many doctors were treating the elderly using therapeutics and methods that boosted the immune system such as Vitamin D, Vitamin K, Vitamin C, Turmeric, Zinc, Ivermectin and more. These immune boosting methods were not promoted and some even band to increase the roll out of MRNA vaccination. Not going into contracts with Pharmaceutical companies who have previously been fined for false advertising and misconduct. Not signing up to contracts with Pharmaceutical companies that will not take any responsibility for damage or loss of life with their product.

- **Media Censoring:** During the pandemic, the media would only report on the urgency to be vaccinated and silence any objections to vaccination. There was coercion and manipulation in the public domain and through the media organised by the government departments to be vaccinated. I can remember hearing they were offering a lottery of \$1M if you would go and get vaccinated during a particular time period! There was persecution toward the unvaccinated in the form of loss of jobs, ridicule, unable to buy certain products without a vaccination status. We were personally impacted in this way.

Improvement suggestions: More independent media and freedom of speech. Disengage from contracts with WHO when they want autonomy over decisions relating to full power during emergency health crisis.

This is only the beginning of the impact on us and others during the pandemic. We would like to see the laws changed regarding lockdowns, mandates. It was ridiculous to hear the masks were mandated when many well-regarded surgeons said that they do not provide protection against air-borne virus'.

Thank you for the opportunity to express these concerns and make suggestions to handle the pandemic better in the future.
