

COVID-19 Response Inquiry

My submission for the Prime Minister and Cabinet in relation to the COVID-19 Response Inquiry is that this measure is not sufficient to fully address the issues and deficiencies of the Australian Government's actions during this event.

I demand a proper Royal Commission to undertake a full and frank investigation into the COVID-19 response. The Royal Commission should investigate and address:

- Deliberate misinformation and messaging from the government and bombardment of the public with "fear porn" rather than actual facts

Examples:

- (a) the safety & efficacy of experimental "vaccines";
- (b) actual risk to the population from the "virus";
- (c) alternate treatment options
- (d) vaccine injuries

- Censorship of information or scientific evidence opposing the "official agenda" leading to biased messaging and stifling of open debate and full and informed decision making

Examples:

- (a) silencing of doctors
- (b) the role of APHRA and ATAGI in censorship
- (c) interference with the doctor/patient relationship and the right of full and informed consent

- Gross overreach of powers; actions taken without proper scientific evidence or cause and in contravention to the human rights of the people of Australia

Examples:

- (a) unlawful mandates and lockdowns
- (b) unlawful fines and restrictions
- (c) corrupt vaccine procurement and secret deals
- (d) monetary incentives to push an untested and unnecessary medical treatment on the Australian people

- Negative impacts to the Australian people from actions taken by the Australian Government

Examples:

- (a) economic impacts (loss of jobs, national debt, inappropriate use of funds of the Australian people)
- (b) mental health impacts
- (c) increases in excess mortality rates as a result of mandates, lockdowns, unproven medical interventions
