

Commonwealth Government COVID-19 Response Inquiry
My Submission

To the Independent Panelists:

I request:

Governance (The act of governing; exercising authority)

- A thorough examination of the ethics of Emergency Use Authorisation vaccines being bought and encouraged to be administered, with financial incentives to doctors, pharmacists, and hospitals, aged care facilities, etc., by the Federal Government;
- A thorough examination of the coercion that the Federal Government was fully aware of, being applied to large numbers of Australians, in order that they keep their employment, be able to travel, visit sick or aged loved ones, and so on, and assess this against the principles of fully-informed consent as enshrined in The Nuremberg Code for experimental prophylaxis;
- A thorough examination of the Federal Government's health authorities' insistence that the vaccines were and are safe and effective, in the light of substantial evidence, admitted by the likes of [REDACTED] and others, that the vaccines neither prevented Covid-19 infection nor transmission;
- A thorough examination of conflict of interest and competing interest factors among the key providers and advisors upon whose advice the Federal Government acted.

Key health response measures

- A thorough examination of the almost complete lack of health advice from the Federal health authorities for time-honoured effective and safe natural and generic drug prophylaxis and treatment protocols (e.g. Ivermectin);
- A thorough examination of the Federal health authorities' advice to do nothing unless and until Covid-19 infection was advanced enough to endanger health (the only disease in history to which this practice has ever been officially advised)
- A thorough examination of the Federal health authorities' placing of Covid-19 vaccinations into the Childhood Vaccination Schedule, being mindful that the younger cohorts had and have minimal serious risk from Covid-19, while serious adverse effects from vaccination exceed the benefits (risk vs benefits ratio).

Mechanisms to better target future responses

- Institute the providing of health prophylaxis and treatment measures that include a full range of time-honoured protocols, including natural and generic drug treatments.

International policies

I urge the panelists' to reject any ceding of pandemic response sovereignty to the WHO or any other non-Australian body.

Please consider advising the Federal Government to conduct a Royal Commission with wide terms of reference into Australia's Covid-19 Response.

Thank you for your consideration of my submission ... [REDACTED]
