

## Health and Non Health Responses

Ordering citizens to be vaccinated with a vaccination that had not been tested over time was a dictatorial move and one which was not welcomed by many citizens who enjoy the freedom of the democracy that we live in here in Australia.

No-one knows the impact these vaccinations will have on the fertility of the children who have been vaccinated. Vaccinations such as polio and tetnus were tested over a period of time to bring to light any side effects of the vaccination. The same time period was not applied to the Covid viruses. I for one, chose to lose my job rather than be injected with a vaccination that needed several boosters and neither did it stop one from either getting the virus or carrying the virus.
