

## COVID-19 Inquiry

To whom it may concern,

I feel that the Government is obligated to hold a proper Royal Commission to thoroughly investigate the response by the Federal Government, National Cabinet, and the various States, to the COVID-19 virus because this was one of the most significant events to happen in Australia, and its consequences and far reaching effects on people, business and the economy was so extensive.

Also, I believe that the current Government is showing a lack of respect for the Australian public, by only having an inquiry into the COVID-19 response, and allowing such a limited timeframe for submissions. This inquiry will appear to be just a deliberate white-wash if the following areas are not properly investigated and reported on:

- Official misinformation – that the COVID-19 trial injections were safe & effective; and the deliberate blocking of information by eminently qualified medical professionals who were offering legitimate medical alternatives;
- Lies that these trial vaccines would block transmission – spread by both media and government;
- Mask mandates and the effectiveness or otherwise of these.
- Corrupt vaccine procurements, and secret contracts; One might ask "what is being hidden from the Australian public"?
- The invasion of the confidential doctor to patient relationship when AHPRA & ATAGI gagged and censored doctors by threatening them with deregistration if they gave individually appropriate advice to their patients that may not have fit the blanket approach of the government. This cost lives.
- Vaccine injuries that have occurred, and the lack of true compensation for those affected; My son was too sick to work for three months after his second vaccine and we still don't know the long term damage done to him.
- Fundamental Human rights such as bodily autonomy being set aside, along with the right to protest; etc.
- Role of approval of the trial vaccines by TGA – especially relying solely on FDA approval, when FDA relied on Pfizer/Moderna trials without their own testing;
- Mandates in various states for many industries;
- Decisions to implement lockdowns, and their length of time and effects;
- The basis of Health directives by the relevant authorities.
- Role of police enforcement of those health directives;
- The excess deaths in Australia that have not yet been investigated;

A thorough investigation of all these areas, by nothing less than a royal commission, is essential. The Australian public deserve some reassurance that the lessons from this era in our nation will be learnt and implemented to ensure that the 'knock on' devastation (caused by an infection) does not repeat itself.

Yours sincerely,

██████████
