

Below are compiled a series of links to well documented sources and highly qualified individuals. Personally, I am greatly dissatisfied with the government, both state and federal, handling of the global pandemic COVID 19.

I am of the firm belief that the proper protocols for pandemic response were either completely ignored out of grave ignorance or wilful and deliberate malfeasance.

The disgraceful act of preventing access to a non-mRNA vaccine developed by Vaxine Pty Ltd based at Flinders University I believe borders on criminal negligence, particularly given that the Chief Health Officer in South Australia, Ms Nicola Spurrier would have been a colleague of [REDACTED] at that same institution.

Given that alternatives to mRNA vaccination were clearly available at the time of the TGA giving regulatory approval for mRNA "vaccines," a yet hitherto time (*ref: Document photo below; Nov 2021*) untried technology, is in my opinion nothing other than gross negligence. The lack of follow up and ignoring of belated release of Pfizer documentation which highlight gross anomalies in testing and data extraction is completely mystifying?

Informed consent not followed in Australia.

29th November 2021

Martin Hahnheuser
Campbelltown,
South Australia

This letter certifies that Martin Hahnheuser has registered to take part in a planned clinical trial of a Covid-19 vaccine known as Covax-19 or Spikogen developed by Vaxine Pty Ltd.

This recombinant protein vaccine has been proven to be effective against infection with the SARS-CoV-2 Delta variant in Phase 3 clinical trials conducted overseas. Based on these results this vaccine has been granted emergency use authorization by the Iranian FDA and as part of plans to register the vaccine in Australia, Vaxine Pty Ltd is currently arranging a clinical trial to assess the impact of varying the interval between the two vaccine doses on its effectiveness.

In order to preserve the integrity of the clinical trial, it is an enrolment criterion that you be Covid-19 vaccine naïve at the time of your entry into the trial. Hence receipt of any other Covid-19 vaccine is a key trial exclusion criteria. It is also critical for the scientific integrity of the trial that you agree not to receive any other Covid-19 vaccine during the conduct of the trial.

Under the revised South Australian Emergency Management Vaccination Direction 2021, being a participant in a Covid-19 vaccine trial is now an accepted exclusion criterion.

Different rules apply to vaccine mandates in each State, so if you do not live in South Australia you will need to check with your State Health Department to find out if being a participant in a Covid-19 vaccine trial is an accepted exclusion criterion for the relevant State mandate.

The Trial will require you to have two doses of Covax-19/Spikogen vaccine at intervals varying from 3 to 12 weeks apart depending on which group you are randomized into.

There is no placebo in this trial, so everyone will receive the active Covax-19/Spikogen vaccine.

We will be doing our best to try and organize Trial sites in each State, but at this stage cannot confirm the time of trial commencement, trial sites or participant eligibility, as this will first necessitate relevant regulatory approvals to be received.

We will be in touch with more information as soon as we can.

Yours sincerely

Clinical Trials Manager
