

To whom it may concern,

My name is Lachlan Maybery. I am a 30 year old fifth generation farmer working together with my father and brother on our family farm [REDACTED]

I am married with two young children, aged 7, 3.

Less than 36 hours after the administration of my second Pfizer vaccine I suffered multiple pulmonary embolisms. I have had every possible test recommended to me by numerous GP's and other doctors at emergency departments. They have found nothing that suggests I was at any risk of having pulmonary embolisms. The general consensus of all the doctors and specialists I have seen is that 'You were one of the unfortunate ones that suffered a rare reaction to the Pfizer vaccine.'

My general health before the pulmonary embolisms was excellent. I was a generally fit, young 28 year old farmer, able to shear 140 sheep a day.

- ✕ I have never smoked
- ✕ Do not drink
- ✕ Have never taken recreational drugs
- ✕ Was on no medications
- ✕ Have no family history of embolisms
- ✕ No pre existing health conditions

I have a vast array of medical documentation available as I under took every possible test that was made available to me to try and find out what caused my injury. If it would be helpful I can provide these as evidence.

More than two years on from my injury I am now finally able to perform all required work duties although I am nowhere as physically fit and able as I was and still have some lingering health complications.

My injury caused the family business to suffer substantially and put my direct and extended family under a lot of extra workload/pressure. Out of goodwill they continued to pay me a wage whilst I was incapacitated and unable to work for over a year. I have had no compensation for any of my medical expenses. My health insurance policy was unable to pay me because I could not get a doctor to sign a document stating I had suffered a vaccine injury because none of them wanted to lose their job.

I would like to submit my experiences of the Pfizer vaccine as evidence showing the following:

1. Vaccine injuries are far more common and not reported to the government or mentioned in statistics because they do not fit the narrow and rigid parameters that have been established per each vaccine.
2. There is no financial support for victims or their families if they have a vaccine injury, that is a serious condition that is not recognised by the current vaccine injury parameters.
3. Not one of the Dr's I asked would put their job on the line and sign a document stating I had suffered a vaccine injury because to quote 'It would most likely cost them their job'. This is blatantly anti-democratic behavior being exhibited by the government and medical

authorities, pressuring the people who should have our best interests at heart – Dr's and specialists to be silent!

4. As an extension of point 3 the censorship of medical practitioners/experts by AHPRA and ATAGI is unconscionable.
5. The above points all converge to provide the government with data that is not accurate and is in no way a true representation of how the vaccine roll out unfolded making the vaccines seem far less 'riskier' than they really are.
6. I live in a small country area with a population of less than 400 people. Of these, 3 of us suffered blood clotting events following our covid vaccines. These odds to me seem very high for a 'safe' vaccine.
7. The secrecy surrounding contracts with vaccine manufacturers and corrupt vaccine acquisitions.
8. Coercion, short of blackmail due to government mandate - As a farmer relying on being able to deliver our grain and hay to the local receivals to sell for income, they informed growers they would not be able to deliver goods unless they could prove they had been vaccinated. This was a direct threat to our livelihoods. This was the only reason I decided to get vaccinated. On reflection, these sorts of mandates are certainly not democratic. I would say they verge on martial law. Or possibly even totally illegal.
9. At every attempt to elevate my injury to the appropriate authorities to try and help prevent other people from being exposed to the possible injuries from the Pfizer vaccine I was shut down and told it was totally safe. I even had one doctor tell me I should book in for my second booster as soon as I was feeling better.
10. The official misinformation about the vaccines blocking covid transmission. Since my injury I have tested positive to covid 19 three times.

As a tax paying citizen living in a Commonwealth Democracy in the country of Australia - I demand a full-scale Royal Commission for a full investigation into the following:

- Transparency of all organisations and governing bodies relating to the mandating and vaccine rollout.
- Vaccine Injuries and the difficulty of meeting the eligibility criteria and making a claim.
- The expansion of injury definitions for all covid 19 vaccines and financial compensation appropriate for covering loss of income, medical expenses and undue suffering/hardship.
- Official misinformation about vaccines blocking transmission of covid 19.
- The repressive actions taken by multiple bodies to silence specialists and doctors.

If you require any further documentation or would like to discuss anything in greater detail, do not hesitate to contact me.
