

Since my 3rd covid shot, first booster, in February 2022, I have developed a [REDACTED] Two GP's and a Dermatologist told me it was just [REDACTED] and gave me a number of ointments and creams which had minimum success. I was also told I needed more sun on my skin as well as moisturiser.

I have been active as a surfer my whole life and have plenty of sun and post surf moisturiser, but these claims were not really taken seriously.

The Dermatologist told me I had picked up a [REDACTED] overseas in [REDACTED] in July 2022, I countered by repeating I had this [REDACTED] since February 2022.

The only change in my regular activity (I'm 61 years old) is the vaccine.
