Commonwealth Government COVID-19 Response Inquiry

My name is [REDACTED] and I am a W.A resident

I am responding as best I can to an enquiry that has given limited time to respond.

It is also very disappointing to find this inquiry does not cover all interactions between Federal and State governments. This is essential in order to gain a complete understanding from these unprecedented events.

I wish to raise some questions and express my concerns about the way this covid response was managed:

- 1) Why were we forced to take dangerous experimental synthetic gene therapies without the right to **“informed consent”** and why were we denied the right to traditional “safe and effective” treatments, of which there are many?
- 2) These dangerous and ineffective experimental gene therapies offered virtually no protection to the public. This was known before the vaccine rollout, so clearly we were not given these dangerous treatments to protect our health. Considering these treatments are not for our health, one must ask why our right to **“informed consent”** was denied and resulted in forced compliance to take these dangerous and “not fit for purpose” experimental treatments, which are still promoted as “safe and effective” to this day?
- 3) It is interesting to note that [REDACTED] did a lot of research experimenting on the reproductive organs of rats. The Australian population is now seeing a drop in fertility and an alarming increase in miscarriage. There are also several serious health risks associated with these dangerous experimental gene therapies such as heart problems and blood clots. This government should be focussed on all the serious injuries and excess deaths that coincide with the vaccine rollout. It appears some of these failings may also require thorough investigation of organisations such as the Therapeutical Goods Administration (TGA), Office of The Gene Therapy Regulator (OGTR) and AHPRA.
- 4) Community support can be improved by not implementing diabolical initiatives such as forced vaccinations, job confiscation for non-compliance, lockdowns on people or business, or bankrupting the economy with the false claim of “pandemic”. This causes poverty, and I grow tired of hearing how government is going to fix things it broke. The death rate from this supposed pandemic is somewhere in the vicinity of 0.16%. A bad flu season can be of this magnitude, so this did not qualify as a “pandemic”.

One must also consider all the false PCR tests elevating the numbers of infection. The majority of people who died were the elderly or had co-morbidities.

Government (or any other entity) must never be able to force vaccinations on any of our citizens. It is disturbing to see how many people have been injured or died from these ineffective and excessively dangerous vaccines.

By preventing these stressful tyrannical health initiatives, we would also be improving the wellbeing and safety of people who become suicidal or depressed as a result of the events during the last three years.

- 5) Regarding vaccine supply, The Australian taxpayer must never be forced to pay unlimited sums of money for dangerous and inferior products. These despicable contracts must never be signed or concealed by the government again, it is taxpayers money, not government money. The Pharmaceutical companies should take all liability for their products and pay compensation for the injuries and deaths caused by these dangerous and inferior products. Again, no treatments or vaccines should be given to the citizens without their valid informed consent.
- 6) Regarding Mechanisms to target future responses to the needs of particular populations: One must question the motives here. We have just been forced to take dangerous and ineffective synthetic gene therapies during a **fake pandemic**, and now government is talking about how it can thrust these dangerous products on more citizens. I have no problem if other people want to play Russian roulette with their bodies, however, it must be done with valid informed consent.
- 7) We now know that one consequence of these dangerous mRNA jabs appears to be the cause of immune imprinting, which results in the most heavily vaccinated being admitted to hospital or ICU at a rate much higher per 100,000 than the unvaccinated. **Why are these products not banned immediately?**
I have enclosed a copy from **NSW Health** presenting outcomes for the final 2 weeks by vaccination status to 31/12/22.
Previous weekly reports from NSW Health showed similar results.
- 8) Will governments start complying with our laws by not forcing citizens to take dangerous and/or experimental treatments, restricting freedom of movement or any other human rights violations? Natural immunity is far safer than the coerced experimental treatments we have received through these tyrannical health initiatives.

Yours sincerely
