

My Submission to the covid-19 Response Inquiry

The lockdowns and mandates had several impacts on myself and many family members, relatives and friends.

I did not get to visit my mother during 2020 before she died early in 2021.

I missed the funeral of a cousin, who was close to the family. Although the funeral was on zoom the technology was not always good.

I have witnessed a friend heartbroken over the death of her [REDACTED] year old grandson, who collapsed with a [REDACTED] after a soccer game and then died.

I have grieved the death of a friend who I knew in a walking group. After she received the booster injection, she had [REDACTED] (which was [REDACTED]) for several days and she died some weeks later.

I have a cousin in an aged care home. On at least one day, she had to continue to have RAT test several times the same day until the result was positive. The first few times gave a negative result and then the last time gave a positive result and then she was isolated. Also on that particular day she had no symptoms. That became a good example of there being lies and deception and quotas, ie certain numbers to be met.

The directives (mandates) were anti-health, all very unhelpful for one's immune system.

It became obvious that the whole thing was a complexity of lies and deception, especially when the rollout of the injections / "vaccines" began without being tested in Australia and then the mandates of the vaccines. Because of the vaccine rollout, and the restrictions on what the doctors were allowed to say to the patients, my trust has been lost in the GP, who I had been seeing for nearly 7 years.

I know some people who could not adapt to consultations online.

Also I have some relatives who needed support because their anxiety worsened because of the mask requirements and developed severe anxiety

over being told off and spoken to harshly by various staff in the shopping centres. I have spent time listening to them to give them support. This was all related to one of the lies regarding masks “preventing transmission”. I have a scientific background and read some accurate information saying they didn’t prevent infection and caused health problems. They did so to me.
