

## **SUBMISSION**

**This submission is concerned with the inconsistencies between claims made by the Australian Government, the Prime Minister and state premiers with regards the Pfizer COVID vaccine which were not supported, and at times contradicted, by statements in documents filed at the US SEC by Biontech.**

**Examples of such instances include, under the following rubrics:**

### **Vaccine Durability**

The developer of the Pfizer COVID vaccine, Comirnaty, BioNTech SE has lodged documents at the US Securities and Exchange Commission (SEC), pursuant to US securities disclosure laws.

The documents [include BioNTech SE's annual report for the year ended 31 December 2021](#) It includes this statement which is among a range of cautionary statements that the company is bound by law to alert investors to:

".....the durability of (the) immune response generated by our COVID-19 vaccine....has not yet been demonstrated in clinical trials....."

This is an important issue for investors for a vaccine with limited durability is not going to sell well, if at all. Taxpayers would not be willing to spend billions on a vaccine that provides protection for only a relatively short amount of time.

However, in Australia, we have in fact seen the then Prime Minister, Scott Morrison, and the state leaders in particular then Premier Daniel Andrews of Victoria and then Premier Gladys Berejiklian of NSW promoting the Pfizer/ BioNTech COVID vaccine, as if it were guaranteed to provide life long protection. In the process they have expended billions.

### **Side Effects Suffered By Pregnant Women And Their Foetuses**

BioNTech, the producer of the Pfizer has disclosed to the US Security And Exchanges Commission that "available data on Pfizer-BioNTech COVID-19 Vaccine administered to pregnant women are insufficient to inform vaccine-associated risks in pregnancy".

It has also disclosed that "data are not available to assess the effects of Pfizer-BioNTech COVID-19 Vaccine on the breastfed infant or on milk production/excretion".

The BioNTech SEC disclosure is available at this link <https://investors.biontech.de/node/9626/html>.

However, The Australian Government, via the Commonwealth Department Of Health, ordered pregnant women to get COVID vaccinated so that their unborn and they may be protected from the "high risk" of catching COVID.

The above and other contradictions were made public on the Realpolitikasia Blog (see examples below), and distributed among media and politicians, so government officials cannot claim ignorance. In any case the SEC archive is available to the public free of charge.

## **BioNTech says two doses of its vaccine provide maximum protection-Hospitalisation, less severe cases, spike in cases, are signs of vaccine failure and not of the vaccine working**

by Ganesh Sahathevan

[More from BioNTech's SEC filings:](#)

On November 18, 2020, we and Pfizer announced that, after conducting the final efficacy analysis in our ongoing Phase 3 study, BNT162b2 met all of the study's primary efficacy endpoints. In this pivotal Phase 3 trial of BNT162b2, there were over 44,000 participants who were 16 years and older, 21,720 of whom received the two-dose regimen of 30 µg BNT162b2, which was given 21 days apart, and 21,728 of whom received the placebo. Among 36,523 participants who had no evidence of existing or prior SARS-CoV-2 infection at the time of the immunizations, there were 170 cases of COVID-19 observed at least seven days after the second dose. Of these 170 cases of COVID-19, 162 cases occurred among placebo recipients and eight cases occurred in vaccine recipients, corresponding to 95.0% vaccine efficacy. Among participants with and without evidence of

prior SARS CoV-2 infection, there were nine cases of COVID-19 among vaccine recipients and 169 among placebo recipients, corresponding to a 94.6% vaccine efficacy. The cumulative incidence of COVID-19 cases over time among placebo and vaccine recipients began to diverge by 12 days after the first dose, and 52.4% vaccine efficacy was observed between the first and second doses, indicating the early onset of a partially protective effect of immunization. **Two doses of vaccine provide the maximum protection observed.** Ten cases of severe COVID-19 were observed with onset after the first dose. Nine cases occurred among placebo recipients and one among BNT162b2 recipients.

Meanwhile government leaders everywhere, the latest being the NSW Premier Gladys Berejiklian, insist that all vaccines including the Pfizer BioNTech are working, for they prevent the severe cases that require hospitalisation. That is not what BioNTech claimed.

## **BioNTech's SEC disclosed risk factors include "limited regulatory experience with mRNA immunotherapies": Despite the warning, governments worldwide have insisted that they have the skills to evaluate, at record speed, the use of the Pfizer/BioNTech COVID vaccine**

by Ganesh Sahathevan

More from BioNTech's SEC disclosures. Again, from 2020 Annual Report:

"...mRNA drug development has substantial clinical development and regulatory risks due to limited regulatory experience with mRNA immunotherapies..."

This writer cannot recall any government authority admitting to the risk of limited experience with mRNA immunotherapies.

Instead governments everywhere have approved and begun supplying the Pfizer/BioNTech vaccine to their people,

The Australian Government, in typical fashion, via its ABC media service, has even launched a media campaign where it asserts that "no corners have been cut" in manufacturing and approving any of the COVID vaccines.

**Pfizer/ BioNTech warned investors that the durability of the immune response of its COVID**

# vaccine had " not yet been demonstrated in clinical trials"-US SEC disclosure by BioNTech calls for investigation into Scott Morrison, Daniel Andrews, and Gladys Berejiklian's promotion of Pfizer/ BioNTech

by Ganesh Sahathevan

Prime Minister Scott Morrison had his Covid jab in February 2021.

The developer of the Pfizer COVID vaccine, Comirnaty, BioNTech SE has lodged documents at the US Securities and Exchange Commission (SEC), pursuant to US securities disclosure laws.

The documents include BioNTech SE's annual report for the year ended 31 December 2021 It includes this statement which is among a range of cautionary statements that the company is bound by law to alert investors to:

".....the durability of (the) immune response generated by our COVID-19 vaccine....has not yet been demonstrated in clinical trials....."

This is an important issue for investors for a vaccine with limited durability is not going to sell well, if at all. Taxpayers would not be willing to spend billions on a vaccine that provides protection for only a relatively short amount of time.

However, in Australia, we have in fact seen the Prime Minister, Scott Morrison, and the state leaders in particular Premier Daniel Andrews of Victoria and Premier Gladys Berejiklian of NSW promoting the Pfizer/ BioNTech COVID vaccine, as if it were guaranteed to provide life long protection. In the process they have expended billions. Taxpayers are entitled to an explanation.
