

## Commonwealth Government COVID-19 Response Inquiry

1. Why did the Government of the day abandon the science based Australian Health Management Plan for Pandemic Influenza (AHMP) in favour of the flawed response to COVID-19? **Solution:** In future adhere to the science based AHMP to manage future pandemics.
2. Why did the Therapeutic Goods Administration (TGA) ban the use/prescription of established, safe, repurposed drugs to treat COVID-19, in favour of unproven and unsafe mRNA (Gene therapy technologies) that were provisionally approved on the basis of a redefinition of the term vaccine? The use of Hydroxychloroquine (16 studies) showed a 76% reduction in mortality, and Ivermectin (51 studies) showed a 49% reduction in mortalities was rejected and in fact demonised through Government narrative. These drugs would have been considered if the AHMP had been utilised. Further to this the application of simple supplements such as Vitamin C, Zinc and Vitamin D are also proven aids in combatting the COVID-19 infection but were not promoted. **Solution:** In future adhere to the science based AHMP to manage future pandemics and listen carefully to leading epidemiologists, professors and doctors who outlined these treatments as early as March 2020 but were "cancelled".
3. Why did the Government of the day, the opposition and bureaucrats fail to protect Australian citizens who were subject to mandatory vaccinations imposed by employers and the States/Territories on the basis of "no jab, no job"? Alternatively Australian citizens were also subject to financial or other inducements to get the jab, including narrative driven by Government and ably supported by media. These actions clearly breach Australia's constitution and yet the entire Federal political establishment including bureaucrats remained silent. **Solution:** In future adhere to the science based AHMP to manage future pandemics, and the political establishment needs to ensure that the MPs constituents are listened to and supported.
4. Why did the Government of the day, the opposition and the Federal bureaucracy do nothing when the TGA interfered in the doctor/patient relationship by prohibiting the prescription of cheap, established, safe medications to treat COVID-19. This has deliberately caused many doctors to breach their Hippocratic Oath and in a number of cases doctors have had their licence to practice medicine revoked. **Solution:** In future adhere to the science based AHMP to manage future pandemics and ensure that the TGA does not interfere adversely with the medical profession.

### Brief Summary

The National interest must guide any objective review of the way in which we handled COVID-19 and the WHO's one size fits all control of our future pandemic response must be rejected completely. The pausing of further production and development of mRNA-based injections unless all toxicity issues are clearly resolved. Whilst a Royal Commission would better serve Australia, I recognise that the politicization of COVID-19 drives this inquiry. Without a complete understanding of both State and Federal Governments and their associated bureaucracy, the Australian citizens are being failed by their elected representatives once again.
