

COVID-19 INQUIRY

My main concerns are:

- 1) Only one acceptable medical response to this pandemic was to use the unproven newly developed vaccination;
- 2) Doctors were prevented by medical authorities from exercising selective approach to vaccination based on medical condition of patients;
- 3) Multiple cases of adverse reaction and even deaths occurred following vaccination;
- 4) Suppression of medical freedom for doctors to use off-label medication to treat COVID-19 patients;
- 5) Use of ineffective and harmful viral medication, such as Remdesivir, to treat COVID-19 patients in hospitals.
- 6) Wide publicity of misleadingly high **relative effectiveness** of mRNA vaccines and total silence on their laughably low **absolute effectiveness**;
- 7) Deliberately false and misleading messages by medical authorities to the public about extremely safe off-label medicines, such as Ivermectin and Hydroxychloroquine. **“You are not a horse”, “It might harm you”**. By the way Ivermectin is even safer than Panadol.
- 8) Consistent denial of natural immunity against COVID-19 for people who recovered from COVID-19 in preference of frequent vaccination.
- 9) Denial of medical procedures to unvaccinated patients, even in cases of life-saving organ transplant surgery.
