

Call for submissions and evidence to the COVID-19 Response Inquiry

Greetings, I am a long time West Australian citizen with a Bachelor of Science in Horticulture.

According to the “Western Australian Vaccine Safety Surveillance – Annual Report 2021” published by the West Australian Department of Health, the average number of adverse effects following vaccination in 2017-2020 was 276. In 2021 the number of adverse effects following vaccination was 10,726. This is an increase of 38.86 times. This occurred with only a 2.78 times increase in the number of vaccines administered in 2021 compared to 2020.

These are shocking statistics which shows the risks of taking a covid vaccine were extremely high. The total Adverse Effects rate Following a COVID-19 vaccine was 264.1 per 100,000 doses in WA.

The government also engaged in vaccine information censorship. The Australian newspaper reported on May 22, 2023 in an article titled “Canberra Silenced posts on Covid” that the federal government intervened at least 4213 times to restrict or censor posts about the Covid-19 pandemic on digital platforms.

This is a national shame and should never be repeated. It shows government overreach, treating Australians as stupid and government compliance with large pharmaceutical companies influence.
