

I had a [REDACTED] approx 2 weeks after the first.

Since then I have never been so ill.

My [REDACTED] is back in full force. I've been [REDACTED] and have spent months in hospital since. I have had heart failure and lung failure.

The fatigue is crippling to the point I cannot work after several attempts that lasted less than a week most times because I crashed and burned due to [REDACTED]. No doctor will advocate for me. In fact my cardiologist at the time said it was perfectly safe to have the second one.

That resulted in hospital due to vasso spasms

My ambulance bill is still in the thousands.

I HAD to have it otherwise all services that my Mum needed to continue live in her own home would cease because I was mums full time carer for 7 years.

My goal was to keep her home as per her wishes.

As it was after the [REDACTED] I had to reluctantly place her in a nursing home. I brought her out after 6 months due to ongoing neglect. My mum suffered because of all this.

My quality of life is nothing like it was. I was a very healthy and active early [REDACTED] who worked out several times weekly.

I'm sure
