

1. The timing of this enquiry (2 weeks before Christmas) and the limited terms of reference (excluding the actions of the States) give the impression that it is a token effort probably with pre-ordained outcomes. The hallmarks of a government initiative designed produce a pat on the back despite Australia's hopelessly bad response to Covid19. I hope I am proven wrong.
2. **The Federal Government failed to legislate anti-discrimination laws which then allowed State Premiers to bulldoze human rights by mandating experimental mRNA vaccines that were, at the time, far from proven to be either safe or effective.**
 - a. The vaccines themselves, having been developed using the cells of aborted human fetuses, pose serious moral concerns as well as promoting the continuing trade in abortion products (those responsible for the purchase and distribution and promotion of these products must repent of their actions and seek God's mercy).
 - b. The vaccines that were procured in bulk by the Federal Government were experimental, unproven and were already showing safety concern signals at the time of purchase. **Spending tax payer's money on bulk purchase of experimental, risky vaccines was irresponsible government.**
 - c. The effective banning of other early treatment protocols (hydroxychloroquine, ivermectin, etc) was stupid. Federal resources dedicated to opening mail to ensure that no one was importing some of the safest drugs known to man was a very petty federal government action, once again at the expense of the tax payer.
 - d. The vaccines (procured by the federal government) have since proven to be ineffective (at preventing Covid19) and far from safe. The vaccine injury reporting systems in various countries (including Australia) show injuries from these **covid vaccines to be multiple orders of magnitude worse than any previous vaccines**. If the cure is worse than the disease, it isn't a cure. There is now a mountain of evidence showing that the "safe and effective" narrative was a lie from the start.
 - e. **The government providing diagnosis directives to doctors (and the "persecution" of doctors who disagreed with the government stance) is a very bad precedent** which was enabled by the Federal Government. It has led to a perception that doctors no longer treat the individual in front of them with the best advice possible, but are simply there to provide pre-approved-by-government advice. This damage to trust in the medical establishment will take a long time to heal and only after government ceases to meddle in individuals' health decisions.
 - f. The disastrous (largely state) government mass vaccinations (enabled by the federal government) has led to hospitals being as full as ever years after the pandemic is over.
 - g. Similarly, **the all-in death rate in Australia had a sharp upturn once mass covid vaccinations commenced** and seems to have steadied at this new rate.
3. Considering, the clear and mounting evidence that the vaccines (procured and promoted by the Federal Government) are neither safe nor effective, it boggles my mind to still see advertisements promoting covid vaccine booster shots. **Continuing this advertising (much**

of which is authorised by the Federal Government) is not just irresponsible, but criminally negligent. To be clear the federal government is still encouraging Australians to take a vaccine that is known to be ineffective and create a host of other health issues (or as an absolute minimum has a very strong safety signal that more than warrants their removal from the market).

4. **A proper enquiry with broader term of reference should be established to bring to justice those who have recklessly played with the lives and health of Australians (many of whom are in the federal government).**
5. Future governmental responses to “health crises” must:
 - a. respect the individual’s choice of treatment;
 - b. be free from influences from outside Australia (ie do not allow Australia to sign up to pandemic treaties, with the UN, WHO or similar, which effectively gives some or much control of Australians over to parties outside Australia);
 - c. legislate anti-discrimination to stop the state premiers from bulldoze human rights again;
 - d. bring those accountable for the debacle of a covid19 response that has killed and maimed many Australians to justice (this may discourage any new government from following the mistakes of the pandemic).
6. **In summary, the Federal Government**
 - a. **Procured mass vaccines that were never safe or effective;**
 - b. **Enabled state premiers to mandate their use;**
 - c. **Continues to negligently advertise their use; and**
 - d. **Through this enquiry seem to want a pat on the back for its efforts when in fact criminal prosecution is the appropriate response.**
