

The Office of Prime Minister and Cabinet

Re: The Covid Inquiry

To Whom it may Concern

Thank you for the opportunity to send in a submission relating to the Covid 19 Response Inquiry. I am a retired Pharmacist who has spent much of my time researching Covid from the beginning. I find that a week to collate a submission with evidence is way too short a timeframe. I know that other submissions will contain the evidence that I raise questions to, so I have asked some questions about the management of the whole Covid Response that I really can't believe any rational and honest Government and associated departments could accidentally have got so wrong for so long.

I am requesting a full Royal Commission into the whole Covid-19 response to gain a truly independent investigation into the reasons and research that directed all the management decisions, undertaken by the Federal and State Governments and Territories and all the various key stakeholder departments that implemented a pandemic management plan that played out with 'yet to be publicly acknowledged' horrendous consequences.

Assessing the severity and transmissibility of a potential pandemic disease should be an honest and transparent process. In early March 2020, I was capable of assessing that the risk profile of the Covid-19 disease was predominantly elderly people with multiple comorbidities. Why couldn't the "experts" research well enough to work that out?

Protecting vulnerable people doesn't mean closing businesses down and locking the majority of the population up. It means giving the small proportion of the population who were vulnerable, an ability to be taken care of as needed within the parameters of respecting human rights and dignity and the freedom to choose to be part of the protected population or not.

Why was the mask mandated when the evidence of its efficacy was sadly lacking?

Why suddenly was a PCR test, known not to be a diagnostic test, allowed to diagnose disease? Why was a PCR test alone, able to diagnose an asymptomatic case when an infectious disease has to have symptoms to confirm an illness? And why did the PCR test probe have to be pushed so far up the nasal passage? Why wasn't the PCR testing cycles capped at the level that might have had a chance of being close to correct?

Why was Professor [REDACTED] ignored when he presented to many key stakeholders, a cheap and effective way of boosting the population's immune system with nutraceuticals? Why were effective and safe repurposed drugs made illegal to use in Australia? Was it because provisional approval of a fast-tracked 'vaccine' was not possible if there were effective treatments?

Why were genetically modified gene agents allowed to be brought into Australia at all without assessment, let alone be made mandatory to keep one's job?

Why would our country sign a secret contract with a pharmaceutical company to buy fast-tracked novel "vaccines" that fit the definition of a GMO?

Why would the Government promote misinformation throughout all media outlets and marketing campaigns in regards to the ability of vaccines to prevent transmission and block infection? The TGA Auspar documents clearly stated that many essential outcomes were not even tested. Why would vaccine injuries be denied by the TGA and those in the community that were injured not be heard?

Why did all departments and organisations involved in pushing the vaccines, not do their due diligence and interpret the data that was available to them, in a scientific, transparent and truthful manner?

Why was the medical profession as a whole effectively silenced by AHPRA and ATAGI? Why are the doctors being prevented from diagnosing injuries and deaths clearly related to the vaccines? Why were doctors threatened if they used Ivermectin that saved lives of Covid patients?

There needs to be a comprehensive, independent, full Royal Commission into the handling of the Covid situation as a whole, involving all Governments, their departments and organisations involved in the management of the "pandemic". Until that is completed, Australia should reject all IHR amendments and the W.H.O. 'so called' pandemic treaty.

Above all, returning to a democratic society underpinned by the Nuremberg Code is essential to a healthy community. Private public partnerships result in governmental decisions which are in the best interests of the private stakeholders instead of the individuals which make up a community. That is what our forefathers and my ancestors fought for in WW1 and WW2. Our children and grandchildren etc have a right to a democratic Australia in which to live.

Thankyou
