

Submission to the COVID-19 Response Inquiry
To the Members of the Independent Panel

I am writing this submission to voice concerns over aspects of Australia's response to the COVID-19 pandemic.

Role of the Commonwealth Government, responsibilities of state and territory governments

The validity, legal basis and manner of implementation of government actions (including “mandates” promoted and allowed to be exercised by private and public employers, medical professionals, etc.) should be evaluated and the complete findings made public. The widespread promotion and use of fear as a means to drive compliance (and circumvent the informed consent protections that the Australian people deserve) should be evaluated and the complete findings made public.

COVID-19 vaccinations and treatments, personal protective equipment and public health messaging

The role that prophylactic and other early preventative treatments (including re-purposed medicines) could have played in COVID response (and why these were not provided or even permitted) should be evaluated and the complete findings made public.

Vaccine supply deals with international partners for domestic use

Full details of the supply deals need, in the public interest, to be fully disclosed to the Australian public. Also, the basis and legitimacy of the manifest failure to support the credible, Australian-based vaccine developer to release a traditional non-mRNA vaccine should be reviewed and complete findings made public.

Financial support for individuals (including income support payments)

A full and open review of Adverse Events Following Injection (AEFI) to provide fair recognition and extend support to those suffering from such events should be undertaken and the complete findings made public. Official and other evidence demonstrates that this continues to be a very real result of the COVID vaccines.
