

Many issues related to the handling of the Covid response need to be examined fully and accountability must be ensured for all of those responsible for the ensuing breakdown in the rule of law and the widespread violation of human rights .

In particular:

- 1) The lack of transparency by the 'National Cabinet' and by health bureaucrats. Any taxpayer funded contracts must be fully accessible to the public unless national security is at risk, which is not the case here. All health advice should be fully transparent and open for debate.
- 2) The lack of debate in all areas of Covid management, especially in the areas of early treatment and mask wearing.
- 3) The suppression/censorship of any dissenting views in relation to possible treatments and/or concerns about the safety of the experimental gene therapy injections.
- 4) The Federal Government consenting to State Border closures as well as State mandates for an experimental gene therapy which contravenes the Nuremberg Code.
- 5) The banning of known cheap, effective, safe treatments such as Hydroxychloroquine and Ivermectin.
- 6) AHPRA's treatment of doctors who questioned the safety of the experimental mRNA gene therapies or who gave exemptions based on their individual patient's medical history or lack of informed consent.
- 7) The unwillingness to examine the excess mortality being seen in Australia since the rollout of the experimental gene therapies (which is also being seen in all heavily injected countries around the world).
- 8) The purchase of SO many vials of mRNA gene therapy at such a cost to the taxpayers, placing the country into serious debt levels.

As a taxpaying citizen of Australia I expect that this inquiry will thoroughly investigate the handling of all aspects of the Covid years and ensure that all government ministers and bureaucrats involved are held accountable for their decisions/actions to ensure human rights abuses never occur in this democratic country again.
