

Covid Inquiry submission,

I would like to say Australia should have it's own pandemic response team, not follow WHO or UN based directives. Also,

- Mask mandates were harmful
- Experimental gene therapies being called vaccines and doctors being threatened by AHPRA so that they can't give informed consent
- The government and media encouraging hate and fear of fellow Austalians who were not masked or not injected with the experimental gene therapy (A young woman saw me w8th9ut a mask on and called the police. The police came and they listened when I said I had an exemption, but The Police shouod never have their time wasted on such things...almost 4 years in and I never got covld or a cokd symptom)
- Inquiry into the science proving Asymptomatic is common enough to warrant any measure at all
- Violations of the Nuremberg Code
- Violations of a person's inalienable right to travel
- Psychological harrassment in the form of coercion into getting experimental medical procedure by government and media
- The ongoing excess mortality caused by the experimental medical procdures

Thank you
