

# Submission to the Covid-19 Response Inquiry

By [REDACTED]

I am an Australian citizen and a farmer since [REDACTED]. In addition to my employment I have contributed to my local community for around 40 years in many aspects such as being a member of the [REDACTED] the local dance school.

When I visited my doctor regarding a health matter entirely unrelated to covid in late 2021, she was strongly insistent that I get vaccinated with an experimental vaccine which only had provisional registration with the TGA. She was acting under the direction of an APRHA position statement of 9 March 2021 (1) I declined the offer of an injection and she asked why. My response was that I was not a person in an 'at risk' category and that I when I was growing up I knew a number of children adversely affected by a previously new medication, thalidomide, administered to their mothers while pregnant.

I wish to know why the TGA has continued to approve the provisionally approved covid gene-vaccines when the Australian excess death rate been above the baseline rate since 2021(2) and when other traditional protein based covid vaccines are being developed and available, one of which is even Australian?(3,4)

[REDACTED]

14 Dec 2023
