

13th December 2023

Submission regarding the term of reference for the Covid Inquiry

Carol Wild - [REDACTED]

Mob: [REDACTED]

To whom it may concern,

My submission has 5 areas of concern:

1. The origin of the COVID

The origin of the covid virus must be established and officially announced to make plain that it is not a conspiracy theory that it began in Wuhan laboratory that was funded by America. Make known also that such laboratories exist in Australian capital cities amongst our densely populated areas. This is dangerous and hidden and needs to be made public and reconsidered.

2. Indemnity is being normalised in Australia and should stop.

Why does our nation provide Indemnity for approx. 14 COVID products, with the last endorsement being given on 10th Oct 2023? Pharmaceutical Companies have a strong history of prosecution after lying about their research and product safety and should not have Indemnity to the deaths and damages they cause. Indemnity should also not be given to any groups of people. Do Politicians, Commissioners or Government appointed medical Officers have vaccine mandate indemnity? Members of the public with Medical history supporting Indemnity, were refused due to the directions of the Government. Thankfully the Fire Department was able to protect its members ability to choose regarding vaccination. The World Health Organisation (WHO) have published that 400 mRNA products are in production for humans, livestock and pets. This technology is clearly damaging to health and I do not give my consent.

3. Procurement of vaccines

mRNA Vaccines and the process of the Therapeutic Goods Administration (TGA) to endorse the use, should be examined. Is there any truth that the TGA did not examine this thoroughly and followed the Centre for Disease Control and Prevention (CDC) in America, accepting their endorsement? Millions of excess vaccines were purchased by the Australian Government providing vast sums to Pharmaceutical Companies unnecessarily. Clearly this is why so many were donated overseas. The Government continues to pander to [REDACTED] with the construction of a factory in Victoria and this needs to be examined. The uptake of COVID vaccines is plummeting and the public do not support ongoing damage to their health.

[REDACTED] cannot disclose private arrangements with vaccine providers to give transparency. What is being hidden? [REDACTED] was suspended in March 2021 and we should suspend or cease vaccination for COVID immediately, as many other nations have done. Australia should exit our WHO membership, save the funding for medical improvements in Australia, and make our own Democratic decisions.

4. Reported COVID Deaths and Media Control

The daily reporting by State Premiers and Chief Medical Officers and their affect to the public should be closely examined. So many lies were pushed onto the public and used to generate fear, mass obsessive thoughts, shame to manipulate behaviour and public victimisation of those who chose their democratic right and freedom of choice, to remain unvaccinated and/or unmasked. Among the lies were a massive distortion of the rising COVID death toll and no reporting of the safe recovery of the huge proportion of both vaccinated and unvaccinated people following infection. Emotional stories were often wrongly attributed to COVID, as people with serious pre-existing conditions were featured. Main stream media should be ashamed of how bias

the relentless reporting was, supported the Government rhetoric, despite many varying facts. Information should be sought from the Funeral Directors who saw changes in death statistics and when this occurred, to see their perspective.

Many facts were not acknowledged:

- Death certificates attributed COVID as the cause of death when this was the last in a string of pre-existing or co-morbid conditions.
- mRNA vaccines were never tested to reduce transmissibility.
- Vaccines were safe and effective.
- Child deaths from the vaccine
- Adult deaths from the vaccine
- Many vaccine injuries unacknowledged
- Antiviral treatments available until GP's were banned from prescribing them. Government should never control G.P. Medical prescribing in that way or impose upon the G.P. and Patient confidential relationships.
- Counting of the COVID death toll was dealt with differently than any other disease.

Ordinarily a Disease is counted seasonally, for easy comparisons and this time the counting was accumulative to be so much more impressive. Comparison rates to Influenza would have provided a much more realistic picture and was therefore not made public.

5. Economic distress and related health impact.

Our country remains in a fragile and distressed position due to the economic disaster the Government decided to impose. Hindsight clearly shows the Swedish model is the best way forward. Initially, the goodwill of the Australian public to help, quickly fell behind the Government strategy, when we were "all in this together". I, like many others wanted to support anything to keep us all healthy and functioning. But the cracks soon emerged as lies were presented as fact and the grim truth of the expectations of Small Business to carry the load, became evident. Next the lockdowns, QR coding, masks, vaccine mandates and bullying. Never again should our country follow this shattering example. Lower socio economic groups with restricted housing and lower incomes were disproportionately suffering and that is not acceptable when compared to the outcome. Children's Education and development has been irreparably damaged and for those living with domestic violence this amounted to abandonment. Many Australians no longer trust the State and Federal Governments and hopefully a transparent and honest COVID enquiry can go some way to repair this damage.

I thank you for the opportunity to make a submission and hope consideration will be given to persons such as Senator [REDACTED] to speak about excess deaths, [REDACTED] – Research Director for Australian Citizens to examine Economic impacts and Dr [REDACTED] to examine vaccine deaths and injuries. These people could bring exceptional views to a regrettably exceptional situation.

[REDACTED]

Yours sincerely,
Carol Wild.
