

I learned that [REDACTED] did not subject babies under two years to the PCR test swabbing the nose – they swabbed the throat instead.

Compassion and reason left with Covid in [REDACTED] hospitals.

The last couple of years have been hard on our immune systems - it seems to me that viruses have hit us both very hard due to everyone being locked away abnormally – in January 23 [REDACTED] I thought I would wake up to a corpse. I had to shield him completely as we could not risk a blocked nose.

He missed out on more nursery. I was isolated and alone (again).

I do not think lockdowns are in any way right. They caused us massive harm and suffering.

The other thing I want to tell you about is [REDACTED] (now deceased).

[REDACTED] asked me when she was alive, “Do you think you can feel [REDACTED] [REDACTED]?”

I thought this was a very strange thing to ask. (This was after [REDACTED] had been diagnosed with [REDACTED] [REDACTED]).

I asked about when this happened.

She replied, “About three weeks after I had the first Pfizer Covid Vaccine (Feb 2021). I was lying in bed and I had a searing pain right where my [REDACTED] was to be diagnosed. It nearly made me fall from bed”.

[REDACTED] died in January 2023 following [REDACTED] (first was last Christmas). [REDACTED] The Trust opened a Serious Incident Investigation as she was not expected to die.

[REDACTED] was not done for some reason.

[REDACTED] had 2 covid vaccines.

[REDACTED]

[REDACTED] had Covid apparently at the time of surgery. What is the point of the vaccines? I have heard the heart can be affected. There are so many unanswered questions for me about this emergency medicine. I think time will bring answers and the truth.
