

Registered as a Registered Nurse 2004/2005.

Permanent part-time employment granted 2009 as a Practice Nurse and also Receptionist at a private practice in Queensland.

Early 2020 saw a huge impact on our workings at the Practice with the introduction of Covid-19, and restrictions and workings. It was an incredibly stressful time with changes to procedures, work spaces, use of intolerable carbon dioxide exacerbating masks etc etc,.. and the amount of foot traffic was the highest I had ever seen during lockdowns with people desperate for scripts and fear of running out of medications.

In April 2021 I was aware that the impact from Covid19 was only slightly worst than a bad influenza year and I couldn't understand why the World Health Organisation in individual countries had pushed for a "Pandemic" status including Australia.

In mid 2020 I read a small study from France in a nursing home where people were given Ivermectin for scabies at a time when Covid-19 struck their facility and they had a remarkable survival rate amongst their elderly residents. I also found another article at around the same time whereby elderly residents in 2 Spanish nursing homes survived Covid19 with the use of antihistamines and antibiotics. This then coincided with the TGA sending an email in approx August 2020 stating the Use of Ivermectin for Covid19 and dosages suggested. This was retracted about a month later and another email appeared stating Ivermectin was not to be used for Covid19. It was only in March? 2022 that I saw ATAGI's reasoning.. that they didn't want Ivermectin to be issued as it might impact on the vaccines rollout - A DELIBERATE WITHHOLDING OF LIFE SAVING MEDICATION - if used successfully would have made null and void emergency use authorisation vaccinations - which is a legal argument!!

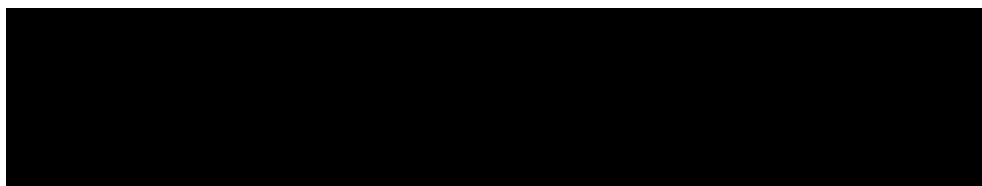

On 18/5/21 I was personally sent an invite to get a Covid19 vaccine from [REDACTED]
[REDACTED] I found out that foetal cell lines had been used in the vaccines and I knew that I would not take it.

[REDACTED] I watched what [REDACTED] had to say. This was approx June 2021. He was treating his 4000 +ive covid19 patient and none of his patients were dying from simple, basic treatments including the use of antihistamines, steroidal puffers and oral steroids at a later stage if necessary and blood thinning aspirin.. and antibiotics if deemed necessary. I was astounded.. how was that possible.. then also remembering the previous 2 studies which I had read in 2020 - but the government and the media was telling me that granny and every man and his dog was going to die from Covid. Instinctively I knew that our government, and health industry was lying.

I came across The Japanese Ministry of Health Study [REDACTED]
[REDACTED]

[REDACTED] I read it in approx August 2021 and at that point begged [REDACTED] to not participate in covid19 gene therapy technology "vaccination" program. So at that point the entire world knew the Pfizer shot was not safe as it produced spike (which is cytotoxic) and the spike went systemically.. I remembered reading the list of organs in the body where the spike went post shots and the amounts and I nearly wept. OBVIOUSLY OUR OWN TGA and governmental bodies were aware of this and kept silent and LIED saying "safe and effective". What does "safe and effective" mean - safe for the giver of the vaccine/ safe for vaccine manufacturers / what does effective mean? Manipulation of the English language at it's best. After this it was a time of researching late into the night, night after night, reading [REDACTED] on DNA lipid nanoparticles and others, September 2021 watching UK funeral Director Alarming Rise in Deaths, VAERS troubling data coming out, Israel's troubling data showing something not dissimilar to Antibody Dependent Enhancement, an INEFFECTIVE vaccine and rising rates of infection, then the Vietnamese health worker study showing rising rates of infection amongst the vaccinated, the concern about potential DNA in the shots, Prion disease potential, discovering the relationships between our regulatory authorities and US regulatory authorities, the relationships with people in power IN AUSTRALIA and being for example on [REDACTED] advisory board, and finally the whole idea of CORPORATE CAPTURE, not to mention the concept of Gain of Function which now I even question our own institutions in the making of Gain of Function.

In August 2021 I saw [REDACTED] she analyses intellectual properties - talking about graphene and pegylated lipid nanoparticles - about it being a bioweapon. I followed [REDACTED] patent numbers and emailed [REDACTED] with the patent descriptions asking directly if there was graphene or graphene oxide in the shots as I felt I had a duty of care in informing patients if I was to be a Patient Advocate in the correct sense of the term. It was sickening and confronting. [REDACTED] never replied to my email. Since then the patent numbers have been removed from [REDACTED] website. I'm a nobody from nowhere and even I could get this far. Quite obviously our leaders were aware of this and should be charged with fraud.

Approx August 2021 a patient told me that 3 out of his 8 mates were magnetised post their vaccinations.. I felt sick in the stomach remembering what I had read about graphene etc. Then we had a patient attend the practice in [REDACTED] who couldn't move her arm post 2nd gene therapy technology (I can't remember if it was

Moderna or Pfizer.. not given at our Practice). This went on for many weeks and it was very disabling for her in her activities of daily living - that's insane - from a vaccine? She wanted to see if she was magnetised so I put a spoon above her vaccination site and dragged it down her Deltoid muscle on her upper arm and she said "Oh.. I can feel that grab". I moved my hand away and there it was.. the spoon was magnetised to her arm - I was very upset, she was very upset, [REDACTED] but he didn't know what to make of it and decided it must of been caused from Iron stores which is ridiculous. I thought Graphene which is highly electromagnetic.

What was the most horrific thing in all this covid charade were the side effects I started to observe, people getting ill post their shots, people with heart problems going into heart failure, someone with heart failure going into decompensated heart failure post the jab, gut issues post jab (spike protein affecting H2 receptors of the gut), cardiac chest pain which were all sent directly to [REDACTED] for investigation and the request to have [REDACTED] report it to our Adverse events reporting system, stroke like symptoms, bizarre nose bleeds, blood clot etc. Then in approx Oct/Nov I personally got [REDACTED] which continued until termination (to this day I don't know if it was because of stress or whether shedding post vaccine is a genuine thing?). Interestingly enough on a personal level, I had [REDACTED]

The Direction from the Qld government vaccine mandate was the icing on the cake (Direction 1, 2, 3 and 4).

I had registered interest on 28/11/21 for Phase 4 Covax-19 Clinical trial. On 14/12/21 I email [REDACTED] asking for Covax clinical trial exemption as a person had to be vaccine naive to participate - the exemption wasn't granted.

on 17/12/21 I put in a complaint to [REDACTED] again no satisfaction. I petitioned with several petitions including E-petition to Hon Yvette D'Ath MP on "evidence required from Qld Govt about covid19 injections to minimise the cases and severity of the disease".

I contacted via email: [REDACTED] to Yvette D'Ath MP and [REDACTED] "I do not want to voluntarily have a covid19 vaccine.. I require full assurance & validity from you that the current Covid19 vacc will not cause injury, disability, adverse reactions or death.. will you be made liable for any injury" etc etc and asked for an urgent reply withing 14 days.. it was merely a stock standard email response that I got.

In November 2021 I also got a position as a support worker with NDIS helping a lady [REDACTED] That position was also vaccine mandated under the Qld Govt Health Direction and I couldn't attend that workplace from 15 December 2021. I was meant to [REDACTED]

[REDACTED]

Covid19 hit our town with Qld opening up in December 2021. Initially all of our patients who fell ill with Covid19 were all vaccinated - All of the vaccinated patrons at the local pub contracted covid19 at the New Years Eve party, also all our local meatworkers contracted Covid19. Not one unvaccinated covid19 patient got seriously ill from covid19 from 90 year old patients down. One woman took Ivermectin and got relief from inflammation at the 7 hour mark (it not only is antiviral but antibacterial and also anti-inflammatory).

I then had to undergo full PPE in the middle of Summer, drive 40 minute round trip prior to each shift to have PCR swabs attended which should have been at Premier Anastaiin Palecek's (not sure of spelling) expense, and being treated by a [REDACTED] in a community which was convinced that the media (well funded by govt in giving airing time to covid19 and espousing gene therapy technology) was right. Meanwhile [REDACTED] was jumping up and down on u-tube as he had now hit his 6000+ case seeing the original Wuhan strain and Delta strain and still no loss of deaths amongst his patients. I emailed DDHHS on 11/3/22 asking about critical workforce shortage and how to contact the Chief Medical Officer personally for an extension but those contacts are not made available for people like me.

We finally got a replacement person to fully take over my position in March 2022. I turned up to work at the practice as/usual on the day after the FINAL cut-off day on [REDACTED] and was handed my letter of termination and I had to leave as/Qld Govt Health Direction Covid-19 Mandate.

Since that time I have read the TGA biodistribution report which was withheld from the Australian public since January 2021 and only exposed in 2023 due to a FOI. The Japanese Ministry of Health Biodistribution [REDACTED] vacc data was correct after all.

Now it would appear from the world leading genetist [REDACTED] that there is DNA plasmids in the Moderna and Pfizer shots in the order of magnitude higher than the acceptable limit specified by the European Medicines Agency. We have all been deceived. I have [REDACTED]

I have Post Traumatic Stress Disorder from this period of time knowing full well that our governmental members and industry bodies are absolutely corrupt to the core and that Corporate Capture is rife in Australia.
