

Hello and thank you for the opportunity to contribute to this inquiry. Being forced to take a vaccine in order to work was an overreach of powers by government, especially for a disease that had a 1% death rate. The information given to doctors that hydroxychloroquine and Ivermectin were dangerous untested drugs was false-evidence was at the time that they were beneficial and a meta analysis subsequently proved this to be so. Government should not lie to control the behaviour of doctors.
