Hi,

My name is Daniel. I am an Army veteran where I was fortunate enough to represent this country in Afghanistan during my active service as well as privately in the capital of Kabul (Afghanistan). I am also writing on behalf of both my immediate and extended family. However some of the information in this letter is based purely on my experience.

I will be talking about the key health response measures (for example across COVID-19 vaccinations and treatments, key medical supplies such as personal protective equipment, quarantine facilities, and public health messaging).

The 3 key points I would like to voice are lockdowns in general (treatment - lockdowns: treating everyone as though they were contagious) and personal protective equipment (masks specifically).

### Lockdowns

#### <u>Issue</u>

They were portrayed as the best tool at the time to save lives by stopping the spread of COVID. However, they have since been proven to cause more harm than good because they may have saved x% of certain people from contracting the virus, but they caused an increase of x% + y% in things like suicide and deaths due to not receiving lifesaving medical treatments or from financial stress.

The lockdows have also been the sole cause of many Australian families losing their livelihoods due to not being able to travel for work or from people not being able to visit their businesses. This in turn has disrupted the supply chains both in Australia and the rest of the world which has lead to record inflation and the middle class Australians being subject to extreme financial hardship. I have spoken to many families that have had to sell their homes due to increased interest rates, which the Government said wouldn't happen, as well as the increase in the cost of living, which the Government also said wouldn't happen.

Lockdowns Could Kill More People Than COVID-19

### **Personal Protective Equipment**

## <u>Issue</u>

The ineffective use of masks as a whole as well as how they were implemented made no logical sense. For example: You needed to wear a mask walking into a restaurant, yet when you sat down you could take it off to eat, but then you had to wear it again if you got up. You can argue that wearing the mask reduces the window of possible infection yet when at a restaurant you spend the majority of your time eating and drinking, meaning the mask is mostly off anyway.

The potential drawbacks outweigh any perceived benefits. The act of rebreathing exhaled air, especially with tight-fitting masks, leads to a decrease in oxygen saturation, particularly for individuals with pre-existing respiratory conditions. This lack of oxygen could induce headaches, dizziness, and fatigue, negatively impacting well-being and potentially exacerbating underlying health issues, not to mention the decrease in cognitive ability. Additionally, the accumulation of exhaled toxins, primarily carbon dioxide, within the mask was a breeding ground for bacteria and could further contribute to health risks if re-inhaled over extended periods, which were forced on people both inside and outside the healthcare setting.

It would have been better to allow people the choice to either wear masks or to freely breathe fresh air.

How is it that we're not questioning the actions taken by the state Governments? This submission is a farce, you're basically asking "how could we do better at the things we did?". Instead you should be asking, "what should we have done or not done?" because the answer is you shouldn't have done everything that you did. You should be held to account on what you have done to this country over the last few years.

Thank you for the time it took to read this.

Daniel.
